

HARRIS COUNTY MUNICIPAL UTILITY DISTRICT NO. 71
c/o Regional Water Corporation
12841 Jones Road, Suite 120
Houston, Texas 77070

Stage 1 – Mild Drought Conditions
Voluntary Water Use Restriction Notice

Dear Customer:

One of the District's three water wells that supply water to our customers developed a mechanical problem, resulting in reduced water production, and is currently under repair to restore full water production capacity. This unanticipated repair is scheduled for completion in mid-August 2015 and has placed an increased demand on the two remaining water wells. Our water supply capacity is adequate to meet the needs of our customers without triggering mandatory water use restrictions at this time. As a contingency measure, the District has implemented voluntary water use restrictions in the event the repair takes longer than anticipated and/or weather continues to be hot and dry.

- A. All District water customers are asked to voluntarily reduce water use both indoors and outdoors. Please help us reduce water use.
- B. Reduce all outdoor watering, including, but not limited to lawn and garden watering, car washing, and window washing.
 - 1. If the last number of your address is an even number, (like 1102 or 14320) for example, use water outdoors only on even numbered days
 - 2. If the last number of your address is an odd number, (like 1513 or 11345 for example, use water outdoors on odd numbered days..
 - 3. Do not use water outdoors between the hours of 6:00 a.m. and 10:00 a.m. and between the hours of 6:00 p.m. and 12:00 a.m. (midnight).

The Board of Directors appreciates your cooperation. Once repairs are completed, we will take down the water use restriction signs, provide update on the District's web site at www.hcmud71.com and you may return to normal water usage. If conditions should worsen, it may be necessary to impose mandatory water use restrictions at which time you will be notified of the more stringent restrictions. A list of additional water conservation tips that may be helpful is attached and for further information please contact the District's Operator, Monday through Friday from 8 am – 5pm, at 281-897-9100, press option 3.

Very truly yours,

Harris County MUD No. 71 Board of Directors

Additional Water Conservation Tips

Prolonged, dry conditions puts a strain on Texas water supplies for all uses. It just makes sense not to waste water. Here are a few more tips to help you make better decisions about water use:

1. In the summer, 50 – 80% of all water consumption is used outside and as much as half of this is wasted.
2. Avoid cutting grass too short, longer blades of grass will reduce evaporation and root stress.
3. Water in the early morning when evaporation loss will be less, and set sprinkler so that the lawn is watered, not sidewalks, driveways and streets.
4. Check for and repair leaking faucets and toilets. A leaking toilet can waste more than 200 gallons of water a day.
5. When it is time to replace water fixtures, ask for water saving fixtures such as low flow toilets, showerheads and water efficient appliances that can reduce your water consumption by more than 25%.
6. For further information on how to conserve water, visit wateruseitwisely.com, www.texaswater.org and www.savetexaswater.org.
